PROFESSIONAL SUMMARY

Computer Science and Engineering student with hands-on experience building full-stack web and mobile applications across React/React Native, Node.js/FastAPI/Flask, cloud APIs, authentication, databases, deployment, testing, and cybersecurity fundamentals.

EDUCATION

University of California, Merced - Bachelor of Science, Computer Science and Engineering
National Honor Society Member | AVID Student Graduate

SKILLS

Languages/Frontend: Python, C, C++, JavaScript, TypeScript, HTML/CSS, React, React Native

Backend/Cloud/Security: Node.js, Flask, FastAPI, Cloudflare Workers, D1, R2, Firebase, Google SSO, iOS Keychain, RBAC, Password Hashing, Session Handling

Tools/Testing/Cybersecurity: Git, GitHub, Xcode, TestFlight, VS Code, Android Studio, Frontend/Backend Testing, Manual QA, Debugging, Wireshark, Splunk, VirusTotal, Burp Suite, John the Ripper, TryHackMe, Cryptography

PROJECTS

Production Tracking Mobile App for an Industry Partner

- Led full-stack development for a team-based mobile app supporting employee, manager, and executive workflows for task tracking, QR clock-in, project management, and reporting.
- Integrated React Native with Cloudflare Workers APIs, D1, iOS Keychain sessions, and Firebase push notifications; built task flows, templates, approvals/denials, LLM reports, analytical graphs, and shareable PDF report links.
- Supported TestFlight deployment preparation, Xcode/iOS debugging, Git workflow organization, and frontend/backend testing.

Time and Task Tracker Research Project for UC Merced / CSED <https://csed-ucm.github.io/projects/t4/>

- Collaborated with UC Merced faculty, students, and CSED on a research-driven application for weekly team meeting minutes, tasks, decisions, attendance, and project progress for students in the I2G program.
- Developed and evaluated an Angular, FastAPI, and MongoDB architecture emphasizing real-time collaboration, version history, structured data collection, and secure access to team and confidential information.
- Researched and prototyped ShareDB operational transformation (OT), Automerge CRDTs, and MongoDB change streams for synchronization, conflict resolution, and audit-history strategies.

Mock Social Media Platform

- Engineered a full-stack social media application using MongoDB, Express.js, React, and Node.js with Instagram-style functionality.
- Built RESTful APIs and CRUD operations for users, posts, comments, likes, and follows; implemented authentication with password hashing/salting and protected backend routes.
- Collaborated in a 3-person Agile-style Git/GitHub workflow across frontend, backend, debugging, and API integration.

Mock Course Registration System <https://lab-8-course-registration-project-fall.onrender.com/>

- Developed a role-based full-stack course registration application with a 3-person team using Flask (Python) and SQLAlchemy ORM.
- Implemented RBAC for students, instructors, and administrators plus CRUD for courses, users, enrollments, and grades.
- Designed a JavaScript, HTML, and CSS frontend connected to Flask backend routes for dynamic user interactions.

Web Honeypot Deployed on UC Merced Interactive Maps Hub <https://campusmap.ucmercedhub.com/>

- Built a Cloudflare web honeypot to analyze IP address data and endpoint interactions; designed bot-banning protocols for threat detection and prevention.
- Evaluated SSH configuration security on Raspberry Pi systems and reviewed AWS caching environment variables.

Cybersecurity Student, CodePath Cyber 101/102

- Completed hands-on labs in vulnerability assessment, SIEM monitoring, threat detection, and incident response; analyzed network traffic and security scenarios for suspicious or malicious activity.
- Collaborated with peers to research emerging threats and develop mitigation strategies for network and system security scenarios.
